

## PSE.NET Tips 'n' Tricks

The Artwork section of the Artwork and Effects palette contains backgrounds, picture frames, graphics and shapes that can be added to your photos (1).

Backgrounds, graphics and shapes all create their own layers when added (2). Frames, on the other hand, are applied to existing layers. To add a piece of artwork click on the thumbnail in the palette and then press the Apply button. To add a picture to a Frame drag the image from an open document to the frame.

All artwork except Backgrounds can be scaled and rotated via the corner, middle edge and rotate handles. Click the image layer to activate the handles. Holding down the Ctrl key whilst dragging skews the graphic.
